

Privacy Policy for Deboogey (Marketplace Candidate Edition)

Developer	Théo De Roy
Effective date	1 August 2026
Policy version	1.0

1. Scope and summary

This Privacy Policy explains how Deboogey (Marketplace Candidate Edition) (the “App”), a macOS developer utility distributed through the Mac App Store under bundle identifier `theoderoy.Deboogey.MCE`, handles information. The App is developed by Théo De Roy (“the Developer”).

The App does not collect personal data, create user accounts, display advertising, perform tracking, or send analytics or diagnostic information to the Developer. Its core processing takes place on your Mac.

2. Information handled on your device

App preferences. The App stores configuration choices in macOS UserDefaults, such as interface and notification preferences, indexing feedback settings, verification options, and Entity Tracker deletion preferences. These settings remain on your Mac.

Local activity history. If you use Entity Tracker, the App may store a local history containing timestamps, feature names, actions, command arguments, application or preference-domain identifiers, and names or paths associated with local Loupe Machine activity. This history is stored in the App’s local preferences and is not transmitted to the Developer.

User-selected applications and files. When you choose an application or a .loum document, the App reads the selected item only to provide the requested inspection, editing, indexing, or document functionality. A .loum document may contain an application identifier or path, a security-scoped bookmark, debug-flag names and values, backing-file paths, and drafted values. The document is saved where you choose and is not uploaded by the App.

Network status. The App may observe whether a network connection is available so that it can present relevant interface state. The Mac App Store build does not perform the Developer’s direct-download edition’s GitHub update checks. Network-status observation is processed locally and is not retained or sent to the Developer.

3. Data collection, tracking, and sharing

The Developer does not receive or retain data from the App. The App contains no advertising SDK, analytics SDK, tracking technology, developer-operated account system, or developer-operated server connection. On-device information is not sold, rented, or shared by the Developer.

The App may offer links that open Apple support pages, GitHub profiles, or other websites in your default browser. Opening a link is an action you choose. The destination website and your browser may process information such as your IP address or cookies under their own privacy policies; that processing occurs outside the App and is not controlled by the Developer.

Apple independently processes information required to distribute, purchase, download, and operate apps through the Mac App Store and related Apple services. Apple's processing is governed by Apple's own terms and privacy policy. The App does not receive your App Store account or payment information.

4. Retention and deletion

Preferences remain on your Mac until you change or reset them, remove the App's data, or uninstall the App, subject to macOS behaviour and any backups you maintain.

Entity Tracker records remain until you delete them in the App, an enabled automatic-deletion rule removes them, you reset the App, or you remove the App's data. User-created .loum documents remain in the locations you selected until you delete them using Finder or another file-management tool.

Because the Developer does not receive this information, the Developer cannot access, recover, correct, export, or delete it remotely. You control it directly on your Mac. Copies may remain in backups until those backups expire or are deleted according to your backup provider's settings.

5. Security

The App uses the macOS App Sandbox and requests read/write access only to files you select. The Developer takes privacy seriously, but no device, operating system, or storage method can be guaranteed to be completely secure. You are responsible for protecting access to your Mac, local documents, and backups.

6. Children's privacy

The App is a developer utility and is not directed to children. The Developer does not knowingly collect personal data from children through the App because the App does not transmit personal data to the Developer.

7. Your choices

You may avoid creating local activity records by not using the relevant features, remove Entity Tracker records from within the App, delete .loulou documents from their saved locations, reset App preferences, or uninstall the App. You may also decline to open external links.

8. Changes to this policy

This policy may be updated if the App's features or information-handling practices change, or if legal or platform requirements change. The effective date and version at the top of the policy will be revised when an update is published. Material changes will be described through an appropriate App Store or in-app notice where required.

9. Contact

Questions about this policy or Deboogey (Marketplace Candidate Edition)'s privacy practices may be submitted to the Developer through the Deboogey project's GitHub page:
